

SYSTEM AND METHOD FOR DYNAMICALLY GENERATING TABLES OF WEB PAGES

ABSTRACT OF THE INVENTION

5 A system and method for dynamically generating tables used for web pages is disclosed. A form head manipulation module is employed in the embodiment to analyze the accessed web page information from a web page buffering unit. A table generation module is employed to generate custom-made tables by accompanying with user priorities and the text attributes of the table objects before showing the custom-
10 made tables on web pages. A table style design module is also employed in the embodiment to receive selection commands from individuals to indicate whether table objects to be selected among the displayed ones. The table style design module then generates web pages included those selected tables to the individuals dynamically.
